Apex Plaza School Tours

The Apex Clean Energy team has designed an in-person, customized experience at our corporate headquarters in downtown Charlottesville, designed to last approximately 90 minutes to two hours for groups of 15 to 20 third- through twelfth-grade students.

Components of the experience can include:

- A briefing by a member of the team responsible for engineering and building our wind, solar, and energy storage projects across the country
- A tour of our headquarters, the largest mass timber building on the East Coast, including a lesson on carbon sequestration and the benefits of cross-laminated timber over traditional concrete and steel construction
- A tour of our Remote Operations Control Center, which manages our operating projects in real time
- A siting activity during which students learn the basics of wind energy by placing turbines on a development site to achieve optimal energy generation

More information on Apex can be found on our website, www.apexcleanenergy.com, including further detail about our new headquarters, Apex Plaza.

If you or another member of your school's faculty are interested in learning more, please email schooltours@apexcleanenergy.com and a member of our team will be back in touch.
